Active Noise Reduction Safety Earmuff

The NoiseBuster BlueTooth® Module allows NoiseBuster ANR Safety Earmuff wearers to use their Bluetooth-enabled cell phones, two-way radios and Mp3 players while in noisy environments where hearing protection is required. Users can now hear cell phone calls and two-way radio communications without lifting their earmuffs and risking damage to their hearing.

The NoiseBuster Bluetooth Module is extremely lightweight (only 12 grams) and plugs into the NoiseBuster ANR Safety Earmuff's audio input via a 3.5MM audio jack. The NoiseBuster Bluetooth Module can be worn comfortably clipped onto a shirt lapel or collar.
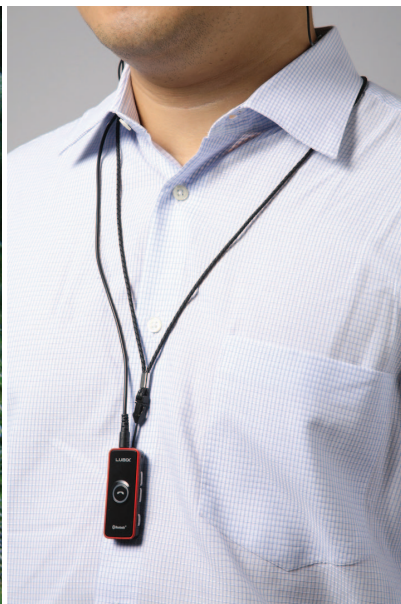

For making and receiving phone calls, the module features a microphone, volume up/down, last number redial, and call reject/waiting/cancel. For listening to music where permitted, the module features play/pause, song selection, track forward/backward. A ring tone signals an incoming call at which time the music stops. Music resumes playing when a call is terminated or rejected.

The NoiseBuster Bluetooth Module delivers up to six hours of talk time, five hours of music and has a standby time of 140 hours. The module is recharged via PC USB Port or A/C outlet; average charging time is two hours. Service distance of the Bluetooth is up to 10M (Class 2). Supported profiles include A2DP, AVRCP, HSP, and HFP.

The Bluetooth module can be purchased for $89.95.
