Active Noise Reduction Safety Earmuffs

Once Your Hearing is Gone, You Can't Get it Back

Hearing loss is preventable – if you protect your ears from the noise prior to the damage. And one of the most innovative hearing protection products on the market is the NoiseBuster® Active Noise Reduction (ANR) Safety Earmuff.

NoiseBuster ANR Safety Earmuffs were specifically designed to tackle environments where conventional passive earmuffs alone could not provide adequate hearing protection.

The award-winning NoiseBuster® ANR Safety Earmuff combines superior passive hearing protection (ANSI certified up to 26 NRR depending on the model) with the most advanced active noise reduction technology (up to 20 dB of low-frequency noise cancellation) to deliver the highest performing hearing protection available.

Available in three convenient models for only \$149 each

Two-Way Communications Module

Communicate Effectively and Safely in High-Noise Environments.

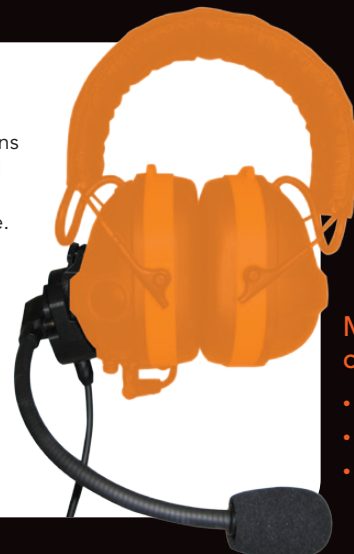

Enhance Your NoiseBuster Active Noise Reduction Safety Earmuff with Two-Way Radio Communications Capability.

Receiving clear, intelligible communications when you're in a high-noise environment is critical to your safety. Being heard clearly is just as important.

Now, you can augment your NoiseBuster ANR Safety Earmuff with a two-way communications capability and get comprehensive hearing protection plus two-way communications.

The NoiseBuster Two-Way Communications Module includes a durable flex boom and your choice of a high-performance noise-canceling electret or dynamic microphone. A variety of portable and mobile radio makes and models are supported. Please contact us directly with your particular push-to-talk adapter requirements.

**Call us today at (203) 210-7230
to discuss your requirements
for this module.**

**Module can be
configured for you:**

- Cell Phone
- Laptop Computer
- 2-Way Radio
